

You Do What?

“Stillwater Billings Clinic offers Skilled Nursing Care.” What does that really mean?

Skilled care is provided when you need a skilled nurse or therapist to help you get better, improve your condition and prevent it from getting worse. Examples of skilled nursing care include IV injections and therapy services.

If you have an operation at a larger facility and need additional care or therapy, Stillwater Billings Clinic can provide care close to home and closer to your family and friends.

Skilled nursing care allows you and your family to take part in setting health goals and functioning independently once again.

Medicare will cover the cost of skilled nursing up to 100 days if you continue to meet Medicare's requirements. If you have questions about you or a loved one's need for skilled nursing care, please call us (322-1000) and visit with our Director of Nursing or Social Services Director.
